- ▶ Plan
- ▶ Tools and Technology Used
- ▶ Work Flow
- ▶ Roles and Responsibility
- ▶ Flow Diagram
- ▶ Final Deliverables
- ▶ Wireframe Model

Plan

Our idea is based on cloud computing. The motivation behind this is to use a cloud service as the intermediate between application and IOT devices such as air quality sensors for measuring air quality index and send this data via ESP8266 sensor. This data is then processed in the cloud and displayed in the application.

Tools and Technology Used

- ▶ Android studio
- ▶ Java
- ▶ XML
- ▶ Amazon Web Service
- ▶ AWS Android API
- ▶ ESP8266 and DHT Sensors
- ▶ Arduino IDE
- ▶ C++
- ▶ GitHub
- ▶ VS Code Editor

Work Flow

| Sl.# | Activities | Dates |
|------|--|----------|
| 1 | Prototype app | 6 Feb |
| 2 | AWS cloud initialization | 17 Feb |
| 3 | AWS IAM user integration | 18 Feb |
| 4 | Defining AWS IOT core | 20 Feb |
| 5 | Registering IOT thing in AWS console with certificate and keys | 26 Feb |
| 6 | Defining IOT device policies | 1 March |
| 7 | Writing and uploading code in IOT devices | 5 March |
| 8 | Testing app and fixing bugs | 15 March |
| 9 | Finalizing app | 20 March |
| 10 | Checking vulnerabilities | 5 April |
| 11 | Final presentation | 15 April |

Roles and Responsibility

| Sl.# | Name | Roles and Responsibility |
|------|-------------------|-----------------------------|
| 1 | Biren Sharma | App Dashboard |
| 2 | Hitesh Mittal | IOT device coding |
| 3 | Jobin Joseph | IOT and android integration |
| 4 | Shantanu Bahuguna | AWS IOT core |
| 5 | Yogesh Sharma | AWS IAM integration |

Flow Diagram

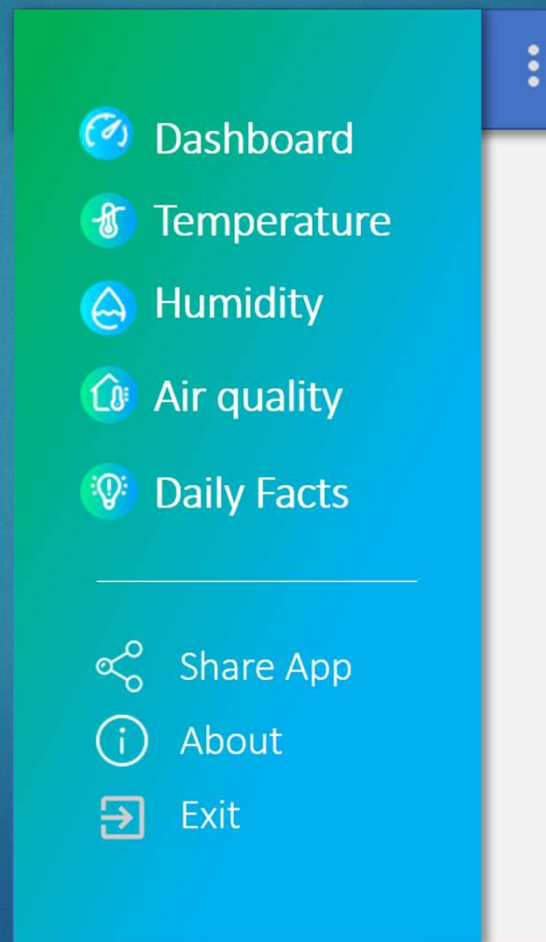

Final Deliverables

Android app with following deliverables

- ▶ Air Quality Data
- ▶ Temperature
- ▶ Humidity
- ▶ Graph predictions
- ▶ Current location
- ▶ Weather facts and awareness
